RE: FORMALDEHYDE CONTENT IN TITEBOND ORIGINAL (5066)

I am providing this declaration on the formaldehyde content of Franklin International's Titebond Original Wood Glue. After reviewing the product formula, I am pleased to inform you that the adhesive product would be within the formaldehyde limits set by the California Air Resources Board (CARB). This product does not contain any formaldehyde by formulation and testing would show non-detectable levels. In addition, it contains no urea-formaldehyde or added urea-formaldehyde and would be green building compliant. I hope you find this information helpful in resolving your concerns about the formaldehyde content of Franklin's products. If you have further questions or need additional information, please feel free to contact us again.

Sincerely,

A handwritten signature in black ink that reads "Amanda Thomas". The signature is written in a cursive, flowing style.
